1. Executive Summary

Mimaric is a Saudi-first Property Technology (PropTech) SaaS platform that unifies the complete real estate operating lifecycle — from prospect acquisition to property handover, lease management, and ongoing facility maintenance — in a single bilingual, regulation-compliant system of record.

Built natively for the Kingdom of Saudi Arabia, Mimaric serves three core customer segments: real estate developers launching multi-phase projects, brokerages managing high-volume sales and lease pipelines, and property managers operating residential, commercial, and mixed-use portfolios. The platform is deeply aligned with Saudi Vision 2030 digital infrastructure — ZATCA e-invoicing, Ejar rental registration, Balady municipal permits, Absher identity verification, and Ministry of Commerce (MOC) entity standards — transforming regulatory obligations into a competitive advantage.

Who Mimaric Serves

- Real estate developers with residential, commercial, or mixed-use portfolios
- Brokerages and sales agencies managing active CRM pipelines
- Property management firms overseeing rentals, maintenance, and collections
- Facility operators needing preventive and reactive maintenance workflows
- Enterprise holding groups requiring multi-entity financial consolidation

Platform at a Glance

Product Name	Mimaric (ميماريك) — Saudi PropTech SaaS
Current Version	3.2 (April 2026) — Universal Real Estate OS
Primary Market	Kingdom of Saudi Arabia (expanding to GCC)
Deployment Model	Multi-tenant SaaS, cloud-native, Arabic-first bilingual
Core Modules	CRM, Properties, Deals, Contracts, Payments, Maintenance, Documents, Reports, Admin
Compliance Stack	ZATCA, Ejar, Balady, Absher, MOC — Saudi Vision 2030 aligned
Pricing Tiers	Starter (Free), Professional (499 SAR/mo), Enterprise (1,499 SAR/mo)

Business Thesis

> *Real estate in Saudi Arabia is being rebuilt in the image of Vision 2030. The tools used to operate it must be rebuilt too — not imported, not translated, but engineered from the ground up for Saudi regulation, Saudi language, and Saudi scale.*

Mimaric replaces spreadsheets, legacy desktop software, and generic foreign SaaS tools with a unified platform that speaks Arabic first, handles Hijri dates, understands SAR currency, and submits invoices directly to ZATCA. Every workflow is regulation-aware by default — no plug-ins, no patches, no compromises.

2. Vision & Mission

2.1 Our Vision

> *To be the operating system of Saudi real estate — powering every developer, brokerage, and property manager with a single intelligent platform that is compliant by default, Arabic by nature, and world-class by design.*

2.2 Our Mission

We exist to eliminate the operational drag of fragmented tools in Saudi real estate. Our mission is to give every Saudi real estate operator — from a solo agent to a national developer — a single source of truth for their customers, properties, deals, contracts, payments, and maintenance, delivered in their language, under their regulations, and on their schedule.

Mission Pillars

- **Unify** — consolidate CRM, sales, leasing, finance, and maintenance into one platform with zero data silos.
- **Comply** — align every transaction with ZATCA, Ejar, Balady, Absher, and MOC requirements out of the box.
- **Simplify** — replace 10 spreadsheets and 5 desktop tools with one intuitive bilingual interface.
- **Elevate** — raise operational standards across the Kingdom to match Vision 2030 digital ambitions.

2.3 Alignment with Saudi Vision 2030

Saudi Vision 2030 is not a backdrop to Mimaric — it is the blueprint. The Kingdom has committed to raising home ownership to 70%, digitizing government services, and transforming the real estate sector into a transparent, investor-ready market. Mimaric is built to accelerate that transformation.

Vision 2030 Objective	How Mimaric Contributes
Digital Transformation	Paperless workflows, cloud-native architecture, e-signatures, ZATCA-integrated e-invoicing, and API-ready infrastructure for government services.
Housing Program	Streamlined off-plan sales, transparent customer lifecycle tracking, and accessible property inventory management that scales to national developer portfolios.

© 2026 Mimaric PropTech Co. — Confidential

Vision 2030 Objective	How Mimaric Contributes
Economic Diversification	Strengthens Saudi PropTech sector, reduces dependence on foreign software, creates high-skill technology jobs, and exports a national software asset to GCC markets.
Regulatory Modernization	Native integrations with ZATCA, Ejar, Balady, Absher — transforms compliance from a cost center into an automated, auditable workflow.
Sustainable Urban Development	Lifecycle asset management, preventive maintenance (CMMS), and facility oversight extend building lifespans and reduce operational waste.

3. Market Opportunity

3.1 Market Dynamics

The Saudi real estate market is undergoing its largest structural transformation in decades. Mega-projects such as NEOM, The Line, Qiddiya, Diriyah Gate, and the Red Sea Project are reshaping supply. The government is simultaneously modernizing the demand side through Sakani, the Real Estate General Authority (REGA), and the Premium Residency program. Regulatory bodies are digitizing at unprecedented speed.

Key Market Drivers

- Vision 2030 target of 70% home ownership is accelerating residential construction and sales velocity.
- Mandatory ZATCA e-invoicing is forcing every commercial operator to modernize finance systems.
- Ejar registration is now the de facto standard for residential leases, creating digital workflow demand.
- Foreign direct investment in real estate is rising, requiring institutional-grade operational transparency.
- Population growth and internal migration toward Riyadh, Jeddah, and the Eastern Province are compressing absorption timelines.
- Saudi operators increasingly demand Arabic-native software instead of translated foreign products.

3.2 The Problem: Operational Fragmentation

Despite the scale of the opportunity, the tools used to run Saudi real estate operations remain decades behind the market itself. The typical developer, brokerage, or property manager operates across:

- 5 to 15 disconnected Excel spreadsheets tracking customers, units, payments, and contracts.
- Desktop accounting software that is not ZATCA-compliant without expensive add-ons.
- WhatsApp groups acting as a de facto CRM, with no audit trail and severe PII exposure.
- Foreign SaaS products that do not understand Hijri dates, SAR formatting, or Arabic form validation.
- Paper-based maintenance logs, site visits tracked in notebooks, and handover checklists lost between stakeholders.
- Manual ZATCA invoicing workflows that consume finance team bandwidth and invite audit risk.

© 2026 Mimaric PropTech Co. — Confidential

> *The tools don't fail because operators are unsophisticated — they fail because no one built software that respected the reality of operating real estate in Saudi Arabia. Mimaric is that software.*

3.3 Addressable Market

Mimaric addresses a large and growing Total Addressable Market across three operator segments:

Segment	Profile	Pain Intensity	ARPU Potential
Developers	Residential, commercial, off-plan launches; 50–5,000+ units	**Very High**	**Enterprise**
Brokerages	Sales and leasing agencies with active pipelines and multi-agent teams	**High**	**Professional**
Property Managers	Residential, commercial, and mixed-use portfolio operators	**High**	**Professional / Enterprise**
Facility Operators	Maintenance, preventive, and technical services providers	**Medium**	**Professional**

© 2026 Mimaric PropTech Co. — Confidential

4. Platform Value Proposition

Mimaric's value proposition is built on a simple premise: every hour spent copying data between spreadsheets, chasing WhatsApp messages, or manually formatting a ZATCA invoice is an hour not spent closing deals, delighting customers, or growing the business. Mimaric returns that time — and the trust that comes with it.

4.1 Core Value Pillars

Mimaric stands on five non-negotiable pillars. Every feature, every screen, and every release is measured against these commitments.

Pillar 1 — One Platform, Zero Silos

A single system of record replaces CRM, property inventory, sales pipeline, contracts, payments, maintenance, and document management. Data flows automatically: a lead becomes a qualified customer, a customer becomes a reservation, a reservation becomes a signed contract, and a contract generates the payment schedule — without a single manual hand-off.

Pillar 2 — Saudi-First Compliance

ZATCA-compliant e-invoicing, Ejar-aligned lease structures, Balady-ready deed and parcel tracking, Absher-compatible customer KYC, and MOC-standard entity configuration. Compliance is not a feature — it is the foundation.

Pillar 3 — Arabic-First Bilingual

Arabic is the default language, RTL is the default layout, and Hijri dates run alongside Gregorian. English is fully supported for mixed teams and international stakeholders, but never at the expense of Arabic quality. This is not a translated interface — it is a dual-native product.

Pillar 4 — Enterprise-Grade Security

PII encryption at rest for phone numbers, emails, and national IDs. Full field-level audit trails capturing every change with before/after snapshots. Role-based access control across seven user tiers with approximately fifty granular permissions. Multi-tenant data isolation ensures one organization's data is never visible to another.

Pillar 5 — Premium Design Standard

A deliberate, minimalist design system built around a navy-and-green brand palette, professional typography (DM Sans and IBM Plex Sans Arabic), and a four-pixel spacing grid. Every interaction is designed to feel trustworthy and premium — because the decisions made inside Mimaric carry real financial weight.

© 2026 Mimaric PropTech Co. — Confidential

5. Platform Modules

Mimaric is architected as a set of deeply integrated modules. Each module is accessible from the primary navigation, data flows automatically between them, and every action is tenant-scoped, permission-checked, and audit-logged.

Module Overview

Module	Primary Users	Core Function
Dashboard	All roles	Six KPI cards and three activity widgets surfacing revenue, deals, contracts, payments, and maintenance health.
CRM	Agents, Managers	Five-stage Kanban pipeline (New → Contacted → Qualified → Viewing → Negotiation) with LOST reason capture and activity timeline.
Properties	All commercial roles	Unit inventory management across apartment, villa, office, retail, warehouse, and parking types with status tracking.
Deals	Agents, Managers	Reservation pipeline with URL pre-fill from interests, extension workflows, and status cascade into contracts.
Contracts	Admins, Managers, Legal	Unified Sale and Lease contracts with signature tracking, status machine (Draft → Sent → Signed), and Ejar-aligned lease fields.
Payments	Finance, Admins	Unified sale and lease installment tracker with Paid / Unpaid / Overdue KPIs and ZATCA invoice generation.
Maintenance	Technicians, Managers	Preventive schedules and reactive work orders across ten trade categories with four-tier priority and full status workflow.
Documents	All roles	Centralized storage for contracts, leases, invoices, deeds, IDs — linked to customers, units, and contracts.
Reports	Managers, Admins	Data export and analytics surfaced as Excel and PDF artifacts for stakeholder reporting.
Help Center	All roles	Support tickets with four-tier priority and four categories (General, Billing, Technical, Feature Request).

© 2026 Mimaric PropTech Co. — Confidential

Module	Primary Users	Core Function
Settings	Admins	Organization configuration (CR, VAT, entity type), user and role management, branding, and language preferences.
Admin Console	System Admins only	Platform-wide subscription monitoring, plan management, invoice oversight, coupon administration, and support queues.

5.1 Deep Dive: Customer Relationship Management (CRM)

The CRM module is the entry point for every revenue-generating workflow in Mimaric. It is designed for high-volume agent teams who need to move leads through qualification without losing context.

Key Capabilities

- Kanban board with drag-and-drop stage transitions across the five-stage pipeline.
- Dedicated LOST toggle with mandatory reason capture (Budget, No Response, Competitor, No Match, Other).
- Activity timeline logging calls, emails, meetings, site visits, notes, and WhatsApp conversations.
- PII toggle controlling visibility of phone, email, and national ID fields.
- Interested Properties section linking customers to specific units with BUY or RENT intent.
- Linked Deals and Contracts section showing every downstream commercial relationship per customer.
- Budget-aware property matching with Over, On, and Under Budget badges for instant intent-unit fit analysis.

5.2 Deep Dive: Properties & Deals

Properties holds the complete unit inventory — decoupled from project hierarchy so brokerages and property managers can operate even without a developer's Project tree. Deals handles reservations with full lifecycle management.

Key Capabilities

- Unit types: Apartment, Villa, Office, Retail, Warehouse, Parking — each with specialized attributes.
- Status machine: Available → Reserved → Sold / Rented → Maintenance — with automatic cascades when reservations are cancelled.

© 2026 Mimaric PropTech Co. — Confidential

- Interested Customers section per unit, showing every active lead with intent badge and agent assignment.
- Reservation pipeline with Pending, Confirmed, Expired, and Cancelled states.
- ReservationExtension workflow allowing agents to request additional hold time with manager approval.
- URL pre-fill support — convert an interest directly into a reservation with unit, intent, and amount pre-populated.

5.3 Deep Dive: Contracts & Payments

Contracts unifies both sale and lease agreements under one tabbed interface, with a strict state machine preventing invalid transitions. Payments is the unified installment tracker, serving both sale and rent collections.

Key Capabilities

- Contract types: SALE and LEASE under one roof — one unified signing and amendment workflow.
- Status state machine: DRAFT → SENT → SIGNED → CANCELLED / VOID, with explicit DRAFT-to-SIGNED shortcut for in-person deals.
- Ejar-specific lease fields: payment frequency, security deposit, auto-renewal, notice period, maintenance responsibility split.
- Unified installment tracker across sale payment plans and lease rent schedules.
- KPI banners: Total Collected, Overdue, and Upcoming — each clickable for filtered drill-down.
- ZATCA-compliant invoice generation with VAT 15% auto-calculation, invoice numbering, and Zatca status tracking.

5.4 Deep Dive: Maintenance (CMMS)

The Maintenance module is a full Computerized Maintenance Management System designed for property managers and facility operators. It supports both reactive work orders and preventive scheduling.

Key Capabilities

- Ten trade categories: HVAC, Plumbing, Electrical, Structural, Fire Safety, Elevator, Cleaning, Landscaping, Pest Control, General.
- Four priority tiers: Low, Medium, High, Urgent — each with configurable SLA targets.
- Four status transitions: Open → In Progress → Completed / Cancelled, with technician assignment and hour logging.
- Preventive plans with recurrence (daily, weekly, monthly, quarterly, annual) auto-generating work orders.

© 2026 Mimaric PropTech Co. — Confidential

- Technician role with mobile-friendly work order views and one-tap status updates.
- Cost tracking, parts usage, and maintenance history stored per asset for lifecycle reporting.

© 2026 Mimaric PropTech Co. — Confidential

6. Use Cases by Persona

Every feature in Mimaric exists to solve a concrete problem for a real operator. Below are the five primary personas, their day-to-day realities, and how Mimaric changes the shape of their work.

6.1 Fatima — Developer Project Manager

Role	Admin at a mid-size residential developer (50–500 units across 1–3 projects)
Pain Points	Units tracked in spreadsheets with frequent version conflicts; payment schedules misaligned with contracts; no single view of project commercial health.
With Mimaric	Unified inventory dashboard, contract-to-payment auto-linking, real-time KPI dashboard, and one-click ZATCA-ready invoicing.
Time Saved	Approximately 15 hours per week in manual reconciliation and status reporting.

6.2 Ahmed — Sales Agent

Role	Agent at a brokerage handling 30–80 active leads at a time
Pain Points	Leads scattered across WhatsApp, notebooks, and personal phone contacts; follow-ups forgotten; no visibility on which units match each client's budget.
With Mimaric	Kanban pipeline with activity timeline, budget-aware property matching, Interested Properties section, and one-click Convert to Deal.
Time Saved	Approximately 10 hours per week in lead admin, plus 2–3 additional closes per month from better follow-up discipline.

6.3 Noor — Finance Officer

Role	Finance manager responsible for invoicing, collections, and ZATCA submissions
Pain Points	VAT calculated manually; invoice numbering drifts; ZATCA compliance risk; no real-time view of overdue payments.
With Mimaric	Auto-calculated VAT 15%, sequential invoice numbers, Zatca status tracking, and an overdue KPI banner with one-click drill-down.

© 2026 Mimaric PropTech Co. — Confidential

Time Saved	Approximately 20 hours per week, plus near-zero ZATCA compliance risk.

6.4 Hassan — Maintenance Supervisor

Role	Supervisor managing a team of 4–10 technicians across 100+ rental units
Pain Points	Reactive-only culture; work orders on paper; no preventive scheduling; tenant complaints slip through cracks.
With Mimaric	Preventive plans auto-generating work orders, priority-based triage, technician mobile view, and SLA tracking.
Operational Impact	30–40% reduction in emergency callouts, higher tenant retention, extended equipment lifespan.

6.5 Leila — Brokerage Owner

Role	Owner of a brokerage with 20+ agents and 500+ properties under management
Pain Points	Portfolio fragmented across agents; no unified reporting; REGA license compliance risk; agent performance invisible.
With Mimaric	Single organizational view, per-agent performance dashboards, RBAC-controlled access, and consolidated export-ready reporting.
Strategic Impact	Institutional-grade operations, easier expansion, defensible audit trail for REGA and investor scrutiny.

© 2026 Mimaric PropTech Co. — Confidential

7. Saudi Regulatory Compliance

In Saudi Arabia, regulatory compliance is not optional, and it is not static. Mimaric is architected so that every entity, every transaction, and every document is already shaped to match the five authoritative government systems that govern Saudi real estate operations.

7.1 Compliance Matrix

Authority	Scope	Mimaric Alignment
ZATCA	Tax & e-invoicing authority; VAT 15%; mandatory electronic invoice generation and reporting	Invoice model with ZatcaStatus enum, automatic VAT calculation, sequential numbering, and fields aligned to e-invoicing schema.
Ejar	Rental registration network; tenant protection; lease authentication	Lease model with Ejar-aligned fields: paymentFrequency, securityDeposit, autoRenewal, noticePeriodDays, maintenanceResponsibility.
Balady	Municipal licensing; building permits; land use classification	Unit and project fields include parcelNumber, deedNumber, landUse, coordinates, and municipal compliance flags.
Absher	Citizen and resident identity services; document verification	Customer model supports nationalId, personType (Saudi Citizen, Resident, GCC Citizen), documentInfo, Hijri date of birth, and hashed PII.
MOC	Ministry of Commerce; commercial registration; legal form governance	Organization model with crNumber, unifiedNumber, vatNumber, entityType, legalForm, registrationStatus, mainActivityCode (ISIC), and national address.

7.2 Compliance as a Business Advantage

Foreign SaaS products treat Saudi compliance as a localization afterthought. Mimaric flips the model: compliance is the starting point, and every workflow is downstream of it. This posture delivers four strategic advantages:

- Zero regulatory debt — new operators can go live without a parallel compliance project.
- Defensible audit trail — every transaction is stamped, signed, and linked to its source entity.
- Lower cost of operations — one platform replaces separate invoicing, leasing, and CRM systems.

© 2026 Mimaric PropTech Co. — Confidential

- Future-proof architecture — as ZATCA, Ejar, and REGA evolve, Mimaric evolves in lockstep without operator action.

> *Compliance is not the ceiling Mimaric targets — it is the floor we start on. Our operators never think about regulation because our product already did.*

8. Competitive Landscape

The competitive landscape facing Saudi real estate operators falls into four categories — each with structural weaknesses that Mimaric is purpose-built to exploit.

8.1 Competitor Categories

Category	Representative Examples	Structural Weakness
Spreadsheets and Email	Excel, Google Sheets, WhatsApp groups, email threads	Zero audit trail, no multi-user concurrency, no compliance, massive operational drag.
Generic Foreign SaaS	Salesforce, HubSpot, Yardi, AppFolio, Buildium	No Arabic-native UX, no Hijri support, no ZATCA / Ejar integration, high per-seat cost, steep implementation.
Regional Point Solutions	Standalone CRM, leasing, or accounting tools	Narrow scope, no cross-module data flow, fragile integrations, inconsistent Arabic support.
Legacy Desktop Software	Installed accounting and property systems from the 2000s	No cloud, no mobile, no modern UX, expensive seat licenses, and dying vendor support.

8.2 Market Positioning

Mimaric occupies a deliberately unique position in the Saudi PropTech market. It is neither a horizontal CRM that has been retrofitted for real estate, nor a narrow point solution. It is a vertical operating system built from the first line of code for Saudi real estate operators.

Positioning Statement

> *For Saudi real estate developers, brokerages, and property managers who are tired of stitching together spreadsheets, foreign SaaS, and desktop relics, Mimaric is the unified operating system that speaks Arabic first, complies with Saudi regulation by default, and scales from a solo agent to a national developer — without ever asking the operator to compromise on language, compliance, or design quality.*

Unique Selling Points

- Saudi-native product with Arabic as the primary, not translated, language.
- Pre-integrated with ZATCA, Ejar, Balady, Absher, and MOC data standards.

© 2026 Mimaric PropTech Co. — Confidential

- Unified CRM to Contracts to Payments to Maintenance in a single platform.
- Multi-tenant SaaS with enterprise security (PII encryption, RBAC, audit trail).
- Premium design standard exceeding typical business software in the Kingdom.
- Free Starter tier removes adoption friction; transparent pricing; no long implementation cycles.

© 2026 Mimaric PropTech Co. — Confidential

9. SaaS Pricing Model

Mimaric's pricing is built on three principles: transparent (published publicly), fair (usage-scaled), and inclusive (a free Starter tier so any operator can begin).

9.1 Pricing Tiers

Dimension	Starter	Professional	Enterprise
Monthly Price	**Free**	**499 SAR**	**1,499 SAR**
Annual Price	**Free**	**4,790 SAR (20% off)**	**14,390 SAR (20% off)**
Best For	Starting out	Growing firms	Large operators
Users	5	25	**Unlimited**
Projects	3	25	**Unlimited**
Units	50	500	**Unlimited**
CRM & Deals	✓	✓	✓
Contracts & Payments	✓	✓	✓
Maintenance (CMMS)	—	✓	✓
Report Export	—	✓	✓
PII Encryption	—	✓	✓
Audit Trail	—	✓	✓
API Access	—	—	✓
Custom Branding	—	—	✓
Support Level	Standard	**Business**	**Premium**

9.2 Pricing Philosophy

- Free Starter tier removes adoption friction for small operators; no credit card required.
- Professional tier is priced to be accessible to any active brokerage or property manager.

© 2026 Mimaric PropTech Co. — Confidential

- Enterprise tier includes unlimited scale, API access, custom branding, and premium support.
- Annual prepayment delivers a 20% discount, aligning operator and platform interests.
- Transparent, published pricing — no opaque enterprise sales cycles required for mid-market.
- Coupon system supports launch promotions, partner referrals, and regional expansion.

© 2026 Mimaric PropTech Co. — Confidential

10. Go-to-Market Strategy

10.1 Target Segments (Priority Order)

1. Independent brokerages and sales agencies — fastest adoption, clear ROI, digital-native owners.
2. Mid-size property management firms — recurring revenue, high module utilization, strong LTV.
3. Mid-market developers — high ARPU, complex workflows, relationship-driven sales motion.
4. Enterprise holding groups — multi-entity consolidation, custom branding, strategic logos.
5. Facility management contractors — CMMS-led entry, expansion into broader real estate modules.

10.2 Acquisition Channels

Product-Led Growth

- Free Starter tier available instantly via self-service sign-up.
- 14-day trial on Professional and Enterprise tiers — no credit card required upfront.
- Three-step onboarding (Company Info → Add First Property → Done) removes activation friction.
- Public bilingual landing page showcasing modules, pricing, Vision 2030 alignment, and social proof.

Content & Thought Leadership

- Bilingual blog covering ZATCA readiness, Ejar best practices, CRM playbooks, and CMMS ROI.
- Vision 2030 alignment content positioning Mimaric as a national technology asset.
- Arabic-first case studies and customer success stories published on mimaric.com.

Strategic Partnerships

- REGA-aligned training programs and brokerage accreditation partnerships.
- Integration partnerships with ZATCA-approved invoicing gateways and Saudi payment processors (Mada, Visa, MasterCard).
- Referral relationships with accounting firms, law firms, and real estate consultancies.

Direct Enterprise Sales

- Dedicated account executives for developers and enterprise holding groups.
- Executive-level workshops demonstrating Vision 2030 and REGA-readiness outcomes.
- Proof-of-value pilots with success criteria tied to measurable operational KPIs.

© 2026 Mimaric PropTech Co. — Confidential

10.3 Implementation Approach

Mimaric is designed for rapid, self-service activation. The implementation journey is deliberately short because every week of delay is a week of continued operational drag.

Standard Implementation Timeline

Phase	Duration	Activities
Day 0	**Under 30 minutes**	Self-service sign-up, organization setup (CR, VAT, entity type), first property added.
Week 1	**1–5 business days**	Bulk import of units, customers, and existing contracts. Team invitations sent. Role assignment.
Weeks 2–3	**5–10 business days**	Pipeline configuration, payment plan templates, preventive maintenance schedules, branding customization (Enterprise).
Month 1+	**Ongoing**	Full operational use, continuous training, success management touchpoints, quarterly business reviews.

© 2026 Mimaric PropTech Co. — Confidential

11. Design & User Experience

The design of Mimaric is the product. Every pixel, every interaction, every color choice communicates trust, competence, and respect for the operator's time. Design is treated as a first-class engineering discipline — not a decorative layer.

11.1 Arabic-First Bilingual Design

Arabic is not a localization target. It is the primary language of Mimaric, and every screen is designed RTL-first, with LTR English as the secondary mode.

Language & Typography

- Default direction: Right-to-Left (RTL); default language: Arabic.
- Arabic typeface: IBM Plex Sans Arabic (weights 300, 400, 500, 600, 700).
- Latin typeface: DM Sans (weights 300, 400, 500, 600, 700) for English text, numbers, prices, and dates.
- Monospace typeface: IBM Plex Mono for IDs, invoice numbers, IBANs, and API keys.
- Bilingual labels throughout (for example: عميل / Customer).
- Numbers, prices, and dates always wrapped in LTR context regardless of surrounding text direction.
- Hijri dates displayed alongside Gregorian where contextually appropriate (e.g., customer date of birth).
- Arabic feels native, not translated — proper typography rhythm, correct diacritic handling, dignified tone.

RTL Layout Principles

- CSS logical properties used throughout (margin-inline, padding-inline) — no hard-coded left/right.
- Sidebar anchored to the right in RTL, to the left in LTR.
- Modal close buttons positioned at the top-left in RTL, top-right in LTR.
- Directional icons (arrows, chevrons, sign-out) mirrored in RTL; semantic icons (heart, star, bell) never mirrored.
- Scrollbar and table alignment respect page direction without visual breakage.

11.2 Premium Design System

The Mimaric design system is built around a disciplined palette, a four-pixel spacing grid, and a deliberate component library inspired by the best of modern enterprise SaaS — but rebuilt to feel unmistakably Saudi.

Color Palette

Color	HEX	Usage
Brand Navy (Primary)	**#182840**	Headings, sidebar, primary buttons, wordmark
Saudi Circuit Green	**#107840**	CTAs, success states, active navigation, circuit accents
Horizon Gold (Premium)	**#D4AF37**	Enterprise tier accents, luxury labels (used sparingly)
Digital Alabaster	**#F8F9FA**	Page background, light surfaces
Steel Slate	**#4A5568**	Body text, secondary icons
Semantic — Error	**#E53E3E**	Destructive actions, overdue status, validation errors
Semantic — Warning	**#DD6B20**	Pending states, expiry warnings
Semantic — Info	**#3182CE**	Links, informational callouts

Spacing & Grid

- Four-pixel base unit — all spacing is a multiple of four or eight.
- Tokens: --space-1 (4px), --space-2 (8px), --space-3 (12px), --space-4 (16px), --space-6 (24px), --space-8 (32px), --space-12 (48px), --space-16 (64px).
- Generous whitespace — elements breathe, never crowd.
- Card padding: 24px standard; section gaps: 32px; page top padding: 48px.

Iconography

- Lucide React icon library — consistent 1.5px stroke, geometric and professional.
- Icon size matched to text line-height for visual harmony.
- No emojis anywhere in the product UI — emojis undermine the premium feel.
- Directional icons (arrows, chevrons) mirror in RTL; semantic icons (check, warning, star) never mirror.

Interaction & Feedback

- Every button has four states: default, hovered, active/pressed, disabled — with clear visual differentiation.
- Loading spinners on every async button (no silent waits).
- Toast notifications for transient feedback (Sonner library) — success, error, info.
- Skeleton loading states for data-heavy pages (billing, documents, deals).
- Field-level validation with red borders and bilingual error messages.
- Micro-interactions for delight: copy-to-clipboard chip, status transition animations.

Error Messaging (Hard Rule)

All user-facing error messages are customer-friendly. Technical errors, variable names, stack traces, and status codes are never shown to end users. Every error message explains what went wrong and what the user should do next, in the user's chosen language.

11.3 Onboarding Experience

Mimaric's onboarding is deliberately short — three steps — because every minute of friction is a customer we lose. The flow is fully bilingual, saves progress automatically, and can be re-entered from Settings at any time.

Three-Step Flow

6. Company Info — organization name (Arabic and English), CR number, VAT number, entity type, legal form, national address. Pre-fills where possible from unified commercial registry data.
7. Add First Property — a single unit added to validate the workflow and demonstrate immediate value.
8. Done — dashboard loads with personalized KPI cards, first-action prompts, and invitations to explore each module.

Users can re-enter the onboarding flow from Settings (?mode=edit) with previously entered data pre-filled — respecting the time already invested.

12. Technology Foundation

Mimaric is engineered on a deliberately modern stack. Every dependency is chosen for a reason: performance, developer velocity, long-term maintainability, and alignment with best-in-class practices in the Saudi and global SaaS ecosystem.

12.1 Architecture Overview

- Monorepo architecture powered by Turborepo — unified build orchestration across web app, portal, and shared packages.
- Next.js 16 with the App Router — server components, server actions, React 19 foundation.
- Server Actions as the primary data pattern — strongly-typed, server-only mutations; no public REST surface by default.
- Multi-tenant data model with organization-level isolation enforced at every query.
- Edge-safe authentication split — NextAuth v5 configuration partitioned between edge-compatible and Node-only surfaces.

12.2 Core Stack

Layer	Technology	Role
Framework	**Next.js 16**	App Router, server components, server actions, React 19
UI Runtime	**React 19**	Latest React with concurrent features and hooks
Language	**TypeScript 5.9**	Strict mode, full type coverage, shared types across packages
Database ORM	**Prisma 7**	Type-safe data layer, @prisma/adapter-pg, schema as single source of truth
Database	**PostgreSQL (Supabase)**	Managed Postgres with edge-safe connections
Authentication	**NextAuth v5**	Credentials provider, JWT strategy, edge-safe config split
Styling	**Tailwind CSS v4**	Utility-first CSS with RTL-aware logical properties
UI Components	**Radix UI + shadcn**	Accessible primitives (25+ components) with custom Mimaric styling

© 2026 Mimaric PropTech Co. — Confidential

Layer	Technology	Role
Icons	**Lucide React**	Geometric, professional icon set
Data Viz	**Recharts**	Charts, graphs, KPI visualizations
File Storage	**UploadThing**	Document upload and retrieval (contracts, IDs, deeds, invoices)
Exports	**ExcelJS + jsPDF**	Excel (.xlsx) and PDF report generation
Testing	**Playwright**	End-to-end testing including bilingual RTL/LTR flows
Build Tooling	**Turbo 2**	Incremental builds, remote caching, task orchestration

12.3 Security Architecture

- PII encryption at rest for phone numbers, emails, and national IDs on Professional and Enterprise tiers.
- SHA-256 hashing (nationalIdHash, phoneHash, emailHash) enabling searchability without exposing encrypted values.
- Bcrypt password hashing with appropriate work factor.
- JWT-based session management with edge-safe secret handling.
- Field-level audit trail (changeSnapshot + fieldChanges arrays) capturing every mutation.
- Seven-role RBAC (System Admin, System Support, Admin, Manager, Agent, Technician, User) enforcing approximately fifty granular permissions.
- Multi-tenant isolation at the query level — no cross-organization data leakage possible.

13. Product Roadmap

Mimaric's product roadmap reflects a deliberate philosophy: depth over breadth. Version 3.0 was a strategic refactor that ruthlessly removed scope in favor of polishing the core universal operating system. Every future release will be measured against the same bar.

13.1 Recent Releases

Version	Released	Headline
3.2	Apr 2026	Unified Property Linking in Add Customer modal; budget-aware unit search with Over / On / Under Budget badges.
3.1	Apr 2026	Full Prospect-to-Close Cycle — CustomerPropertyInterest model, Interested Properties / Customers sections, linked deals & contracts, cascade fixes.
3.0	Apr 2026	Universal Real Estate OS pivot. Scope reduction: 60+ routes → 22; 77 actions → 39; 100 models → 65. Removed GIS, Planning OS, Land Acquisition, Wafi, Collections.

13.2 Near-Term Roadmap (Next 2 Quarters)

- Advanced analytics dashboards — per-agent performance, cohort retention, funnel conversion rates.
- Tenant self-service portal — rent payment, maintenance request submission, document access.
- ZATCA Phase 2 integration hardening — direct API submission with real-time status reconciliation.
- Mobile-first technician application — offline work order completion, photo capture, signature collection.
- Advanced document templates — parameterized contract generation with e-signature integration.
- Workflow automation engine — rule-based triggers (e.g., auto-create renewal notice 60 days before lease end).
- Bulk import and migration tools for operators moving from legacy systems.

13.3 Medium-Term Vision (12 Months)

- Open API for Enterprise customers — full programmatic access to CRM, properties, deals, payments.
- Marketplace of third-party integrations — Saudi banking partners, SMS gateways, accounting exports.

© 2026 Mimaric PropTech Co. — Confidential

- Embedded payments — Mada, Apple Pay, and bank transfer collection directly inside Mimaric.
- AI-assisted workflows — lead scoring, churn prediction, maintenance cost forecasting.
- GCC expansion — UAE, Qatar, Kuwait regulatory support while preserving Saudi-first positioning.
- Native mobile apps (iOS and Android) for agents, managers, technicians, and tenants.

13.4 Long-Term Ambition

> *Mimaric will be the default operating system of Saudi real estate — the platform every developer, brokerage, and property manager defaults to, in the same way every operator today defaults to Microsoft Office. We are building a durable, national software asset aligned with Vision 2030 for the next twenty years.*

Appendix

A. Document Control

Document	Mimaric Business Documentation
Version	3.2 (aligned with product v3.2)
Status	Active — Confidential
Owner	Mimaric PropTech Co.
Author	Omar Al-Ghamdi (Founder)
Date	April 2026
Next Review	Q3 2026

B. Glossary

Term	Definition
ZATCA	Zakat, Tax and Customs Authority — Saudi tax regulator; governs VAT and mandatory e-invoicing.
Ejar	National rental registration network operated in Saudi Arabia; standardizes lease contracts.
Balady	Saudi municipal services system — building permits, land use, parcel and deed records.
Absher	Saudi citizen and resident identity services platform; drives KYC and document verification.
REGA	Real Estate General Authority — Saudi regulator overseeing brokerage, licensing, and off-plan sales.
MOC	Ministry of Commerce — Saudi authority for commercial registrations and corporate compliance.
CMMS	Computerized Maintenance Management System — software for preventive and reactive maintenance workflows.
RBAC	Role-Based Access Control — permission model where access is granted via assigned roles.

© 2026 Mimaric PropTech Co. — Confidential

Term	Definition
SAR	Saudi Riyal — official currency of the Kingdom of Saudi Arabia (ISO 4217: SAR).
Hijri	Islamic lunar calendar used officially in Saudi Arabia alongside the Gregorian calendar.
PII	Personally Identifiable Information — encrypted at rest in Mimaric for phone, email, and national ID.
